DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-8 and 10-20 are rejected under 35 U.S.C. 103(a) as unpatentable over Russell et al. US 5,354,420.

Regarding claims 1 and 17, Russell '420 discloses an apparatus for laser etching comprising an open air region for processing substrates, a laser therein, and a halogen gas supply (see abstract and Figs), which would be capable of chemically reacting, dissipating, and configurable by an ordinarily skilled artisan to the claimed aspect and removal ratios.

Russell fails to disclose halosulfide assist gas.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to use halosulfide gas because Russell discloses halogen gases and sulfides (column 17, bottom), which would at least suggest halosulfide and also

because process limitations are not given undue weight in apparatus claims.

Regarding claims 2-5, Russell discloses laser etching, which would at least suggest mechanisms for holding the substrate and moving the laser to perform the disclosed energizing and etching.

Regarding claims 6-8, Russell discloses means for gas supply (see Fig. 6).

Regarding claims 10-16 and 18-20, Russell discloses a laser, semiconductor etching, silicon and various halocarbons (Table 2) and it would be obvious to use close variants thereof through routine experimentation.

Response to Arguments

Applicant's arguments filed 1/24/08 have been fully considered but they are not persuasive.

It is argued that moreover, additional search of the Russell reference... to assist gases. This is not persuasive because it would have been obvious to one of ordinary skill in the art at the time the invention was made to use halosulfide gas because Russell discloses halogen gases and sulfides (column 17, bottom), which would at least suggest halosulfide and also because process limitations are not given undue weight in apparatus claims. The examiner recognizes that obviousness can

only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See *In re Fine*, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988) and *In re Jones*, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992). In this case, the presence of halogens, sulfide, and an assist gas are present and it would have been obvious to have at least some sulfides present in the gaseous state during or after the disclosed prior art etching reaction process.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
